## TechHouse.dk a/s becomes part of the r2p group

### Ringsted-based IT developer complements product portfolio

The r2p group announces the successful acquisition of TechHouse.dk a/s. On Friday, its Danish subsidiary r2pHolding APS has taken over the IT developer. TechHouse.dk a/s is an innovative company operating in fleet management since 2002. Enhanced vehicle efficiency, optimized routes, driver disposition and billing modules are represented in the offered solutions. The new subsidiary is based in Ringsted (Zealand, Denmark) and adds 29 years of experience in the development of planning software to the r2p group.

With this acquisition, the full service package for attractive, secure and economically feasible buses and trains is expanded: starting from now, the r2p group offers – in addition to mobile CCTV and comprehensive fleet management – field-proven tools for planning and disposition. This expanded product portfolio offers a synergetic combination of historic, real-time and planning data to operators.

Ulrik Rasmussen, Managing Director at r2p, announced on Friday: “We are glad to have the TechHouse.dk team on board now. The TechHouse.dk team brings a wealth of experience in the areas of planning and disposition. The synergies between r2p and TechHouse.dk will perceptibly strengthen the whole group’s core competences and support the company’s next exiting development steps.”

“I’m happy that TechHouse.dk is now part of the r2p group,” says Thomas Bøge and continues, “with the closing of this sale, we offer our clients and their data even more security. At the same time, we’ll ensure that our future developments will be in accordance with telemetry and international market needs.” Thomas Bøge will continue as head of software development in the group and also all employees will continue to be based in Ringsted.

The rapidly growing r2p group, headquartered in Flensburg, Germany, operates internationally in 27 countries with subsidiaries in Denmark and Brazil. The group cooperates closely with a partner company in Taiwan, a sales office in the United Kingdom, and local manufacturing in India. As a market leader, we develop and distribute software and hardware for rail and road vehicles, mobile video surveillance and telemetric solutions with great passion. Our experienced Swedish investor, Alder AB, with a total investment of more than 110 million euro, provides us with ongoing support for our mission.
