## Press Release

### **Nimbus and r2p – working together for outstanding transit technology.**

Flensburg, June 8<sup>th</sup> 2017

Nimbus Journey Information, React Technologies and r2p are very pleased to announce that they are joining forces.

Last week r2p completed the purchase of Nimbus journey information and React Technologies. Their combined suite of products offer complete information management and passenger information solutions for trains, trams and buses. These can be taken as discrete modules, or as a fully integrated solution.

The r2p group, headquartered in Flensburg, Germany with subsidiaries and sales offices in 10 countries, provides cutting edge technologies on vehicle transit systems worldwide. In the UK, r2p has established itself as the leading supplier of on-board rail CCTV solutions, including its award-winning real time upload-download solution “Horizon”.

Nimbus provides real-time operational management and passenger information systems for the UK public transport industry – including Reading Buses, Blackpool Transport and the West Yorkshire Combined Authority. React provides accessibility solutions for public transport applications around the RNIB React system.

Russell Gard from Nimbus React said ‘I am really excited to be working with r2p ongoing. Our companies complement each other in ethos and passion for the market. The additional resources that r2p bring means that Nimbus, React and our people have a superb future ahead of us’.

Ulrik Ortiz Rasmussen, CEO of r2p, commented ‘this acquisition positions r2p as the foremost provider of truly innovative real-time transit information and management technologies for all modes next to our strong CCTV, PIS, PA and APC technologies. We are pleased to welcome the Nimbus and React team into the r2p family – the UK market is one of our priority markets and with this acquisition, we further strengthen our strong market position going forward.’
