TriVision Joins Forces with Insort and Qcify to Advance Food Packaging Inspection, Food Inspection, and Food Sorting Backed by Alder

TriVision, a Danish company recognized for its leading vision technology and intuitive vision systems and software for quality inspection in the food industry, now joins forces with Insort and Qcify as strategic partners in food sorting and inspection. This partnership reinforces a shared vision of driving technological innovation and automation in food processing and quality control through advanced vision solutions. The collaboration is backed by Alder, a Nordic financial investor known for its focus on sustainable technology investments.

The cooperation between TriVision, Insort and Qcify, is built on strong foundations: Qcify is a global leader in AI-driven quality control solutions, while Insort pioneered hyperspectral imaging technology. The transaction with TriVision was successfully completed with Carsquare acting as the exclusive advisor to the seller.

Together, these three companies will innovate and set new standards for food safety, efficiency, and waste reduction.

A Stronger Partnership for the Future of Food Safety

With over two decades of experience in visual inspection systems, TriVision helps food manufacturers ensure consistent quality and reduce waste through real-time decision-making and data-driven insights. Since 2015, Qcify has revolutionized automated quality control with its AI-driven inspection systems. Since 2011, Insort has pioneered Chemical Imaging Technology (CIT[®]), offering hyperspectral real-time analysis at a molecular level.

The collaboration now offers a fully integrated approach to food inspection and sorting. By combining TriVision's advanced vision solutions, Qcify's AI automation, and Insort's chemical imaging, the group accelerates the development of smart, safe, and sustainable food processing technologies.

Statements from the Leadership Team

Dag Broman, Partner bei Alder

"With the addition of TriVision to our group, we continue to strengthen our commitment to sustainable food production. The combined expertise of TriVision, Qcify, and Insort creates a powerful platform for the future of intelligent food processing."

Jesper Bach, CEO of TriVision

"TriVision joining the group marks another exciting step in our mission to push the boundaries of food inspection and remain the leading provider of inspection solutions. Together, we can drive innovation and expand our market presence on a much greater scale."

Matthias Jeindl, Founder of Insort

"We welcome TriVision as the next strategic partner in our collective journey. Their outstanding technological know-how complements and enhances our efforts to deliver unique, intelligent inspection solutions that shape the future of food safety and efficiency."

Building the Future of Food Processing

This strengthened partnership represents a key milestone in Alder's long-term strategy to build a robust ecosystem of technology-driven companies focusing on vision-based automation in the food industry. By leveraging the combined strengths of TriVision, Qcify, and Insort, the group aims to create the most advanced, sustainable, and intelligent food processing solutions on the market. Together we will help shape a smarter, safer, and more sustainable future for the food industry.

TriVision, Qcify, Insort, and Alder: Together for a smarter, safer, and more sustainable food industry.

About TriVision

Founded in 2000, TriVision offers leading machine vision technology to automate inspection processes in the food and pharma industries. The user-friendly systems inspect both products and packaging in production plants worldwide. TriVision is a market leader in turnkey vision inspection solutions capable of inspecting both seals and labels on packaging.

About Qcify

Established in 2015, Qcify specializes in automated quality control solutions for the global food industry. The company develops AI-powered inspection systems that ensure consistent, objective, and high-speed quality assessments. Qcify's smart solutions reduce human error, increase efficiency, and provide food producers with the highest level of accuracy in quality assurance.

About Insort

Founded in 2011, Insort is a global leader in food sorting and inspection technology. The company pioneered Chemical Imaging Technology (CIT[®]), which enables real-time, hyperspectral analysis of food products, ensuring superior quality control and safety. Insort's solutions help food processors worldwide minimize waste, improve efficiency, and enhance food safety.

About Alder

Alder is a Nordic investment firm dedicated to supporting technology-driven businesses that contribute to a sustainable future. The firm focuses on growth-oriented companies that provide innovative solutions in industrial automation, clean technologies, and resource efficiency. Alder actively invests in companies that have strong market potential and a clear vision for sustainability-driven impact.
